

Elastic Odoo Connector

The Elastic Odoo Connector connects Odoo 18.0 with the Elastic B2B platform through secure SFTP-based flat-file exchange. It supports outbound product, customer, catalog, pricing, inventory, feature, location, and sales-rep feeds, plus inbound Elastic order import into Odoo sales orders.

Secure SFTP

B2B Data Feeds

Order Import

Connector Overview

A client-safe summary of what the Odoo connector handles.

The connector keeps Elastic B2B aligned with Odoo while preserving operational control inside Odoo.

- Keep Elastic B2B catalog, pricing, customer, inventory, and rep data aligned
- Import Elastic orders into Odoo with staging, duplicate detection, and retry.
- Separate Beta/Sandbox and Production SFTP profiles for controlled rollout.
- Use governed identifiers and metadata for products, customers, catalogs,
- Provide operator-facing logs and controls inside Odoo.

blind imports

How data moves

Outbound feeds keep Elastic aligned; inbound orders are staged, validated, and created in Odoo.

Feature Highlights

The capabilities Elastic can describe to prospective clients.

Product and catalog data

Products, variants, colors, sizes, catalog definitions, catalog mappings, and merchandising tags.

Customer access

Sold-To/Ship-To IDs, legacy account support, customer catalogs, price levels, and cross-reference matching.

Pricing

Variant-aware pricelist exports with Elastic price-group codes and list-price fallback.

Inventory ATP

Time-phased availability by warehouse with optional quotation demand and BOM component fallback.

Order import

SFTP polling, row grouping, staging, duplicate detection, sale-order creation, and retry.

Operator controls

Manual feed buttons, inactive cron hooks, logs, environment switching, and host-key verification.

Outbound feeds

Feed	File	Business purpose
Products	products.csv	Item, SKU, UPC, color, size, permission, availability
Customers	customers.csv	Sold-To accounts, catalog groups, price level, address
Pricing	prices.csv	Pricelist-driven price groups and retail/list fallback
Inventory	inventory.csv	Warehouse ATP and future availability snapshots
Catalogs	catalogs.csv	Catalog definitions, dates, permissions, brand, season
Mappings	catalog_mapping.csv	Catalog item/color placement rows
Features	features.csv	Governed product feature and technology values
Tags	product_tags.csv	Merchandising tags from Odoo sources
Reps	reps.csv / rep_mappings.csv	Sales reps and customer-rep assignments
Locations	locations.csv	Warehouse/location availability targets

Operational Model

How teams run, observe, and troubleshoot the connector.

Beta and Production

Separate SFTP profiles allow test validation before production cutover.

Secure exchange

Password or SSH key auth with stored host-key verification and fingerprint capture.

Configurable files

Delimiter, encoding, header row behavior, date formats, and per-feed toggles.

Traceable runs

Export and import logs capture state, filename, record counts, and error messages.

Staged imports

Incoming orders are captured as staged records before sale-order creation.

Retry workflow

Failed staged orders can be reviewed and retried after data correction.

Implementation checkpoints

- Product identifiers and SKU/UPC/StockItemKey matching.
- Customer Sold-To and Ship-To IDs.
- Price groups and catalog-specific pricing.
- Warehouse codes and ATP inventory behavior.
- Catalog permissions and product visibility rules.
- Feature, technology, color, and size taxonomies.
- Order file matching rules and auto-confirmation policy.

Technical Appendix

Concise implementation facts for technical reviewers.

Area	Included behavior
Platform	Odoo 18.0 addon maintained by P2 Business Solutions.
Transport	SFTP flat-file exchange with Beta/Sandbox and Production connection profiles.
Security	Password or SSH key authentication; stored host-key verification available.
Exports	Products, tags, features, customers, custom fields, locations, prices, inventory, catalogs, mappings, reps.
Imports	Elastic order files staged by order/shipment, validated, deduplicated, and converted to Odoo sale orders.
Governance	Product IDs, StockItemKey, colors, sizes, features, catalogs, price groups, and customer xrefs.
Automation	Manual actions plus inactive scheduled actions for import orders and export all enabled.
Observability	Export/import logs plus order staging states for processed, duplicate, and error records.

Recommended client validation

Before production use, confirm identifiers, customer matching, price groups, warehouse codes, catalog permissions, taxonomies, order matching rules, and auto-confirmation policy.
